The present invention relates to an isolated heteromeric ligand of tumour necrosis factor (TNF)-family, referred to as APBF comprising a TNF-family member APBFL subunit linked non-covalently to TNF-family member BAFF subunit. APBF is useful for diagnosis or treatment of various immune system-related disorders in mammals, preferably humans. Such disorders include cancer, including cellular disorders, for e.g. renal cell cancer, Kaposi's sarcoma, chronic leukaemia, breast cancer, sarcoma, ovarian carcinoma, rectal cancer, throat cancer, melanoma, colon cancer, bladder cancer, squamous cellular hyperproliferative colon cancer, bladder cancer, squamous cellular hyperproliferative colon cancer, such as sclenderma, pannus formation in rheumatoid arthritis, postsurgical scarring and lung, liver and uterine fibrosis and immunodeficiencies, inflammatory diseases, lymphadenopathy, and immunodeficiencies, inflammatory diseases, lymphadenopathy, cancer immune diseases and graft versus host disease. APBF is also useful for producing monoclonal or polyclonal antibodies and for identifying circum, and modulators affecting bloogical function and receptors interacting circum, and modulators affecting bloogical function and receptors interacting contents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ANU12172-AAU12446 represent novel human secretory and transmembrane
PRO polypeptides. The PRO polypeptides are useful to detect other
PRO polypeptides, to nink bloactive molecules to cells expressing
PRO polypeptides, to modulate bloidgical activities of cells expressing
PRO polypeptides, to modulate bloidgical activities of cells expressing
PRO polypeptides, and to detect the presence of mammalian lung, colon,
breast, prostate, rectal, cervical or liver tumours by comparing PRO
polypeptide expression in a cell sample to that in a control sample.
Some of the 275 sequences are also useful to stimulate the release of
tumour necrosis factor-alpha (TNF-alpha) from human blood, the
proliferation or differentiation of chondrocytes, the proliferation or
gene expression in pericyte cells, the release of proteogyycans from
cartilage, the proliferation of inner ear utricular supporting cells or
of T-lymphocytes, the release of a cytckine from peripheral blood
monocytes (PBMCs), or the proliferation of endothelial cells. Some of
the PRO polypeptides may modulate glucose or free fatty acid uptake by
skeletal muscle cells or by adipocytes, or inhibit binding of A-peptide
to factor VIIA. The PRO polypeptides can be used in assays to identify
RO polypeptides can be used to generate probes, antieense RNA/NNA,
transgenic or knock out animals and can be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated, secretory and transmembrane PRO polypeptide used to detect other PRO polypeptides, link bioactive molecules to cells expressing PRO polypeptides, and detect the presence of mammalian tumours e.g. lung, breast, prostate, cervical

TACINITY Complex is useful for modulating an intracellular signalling cascade mediated by TACI/TACI-L complex. Antagonists of TACI/TACI-L complex are used to inhibit the interaction between TACI and TACI-L complex are used to inhibit the interaction between TACI and TACI-L for therapeutic purposes to treat tumour and tumour metastasis and to combat various autoimmune diseases e.g. multiple sclerosis and diabetes, as well as other disorders, such as viral infection, rheumaciod arthritis, graft rejection, and immunoglobulin (Ig) E-mediated allergic reactions and inflammation. The interaction is used to study cellular processes associated with tumour necrosis factor (TNF) receptors such as immune regulation, cell proliferation, cell death and inflammatory responses. The interaction between the extracellular region of TACI and TACI-L can be used to further develop understanding of which cell types TACI-L polypeptide (TACI-Ligand). The antagonist or agonist of 8888888888888888888888888

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                      ......ENAQISLDGDVTFFGALKLL 218

Sequence 2. Application US/09565423

Patent No. 6475997

GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: TALL-1 NUCLEIC ACID MOLECULES, PROTEINS, RECEPTORS AND TITLE OF INVENTION: METHODS OF USE THEREOF
FILE REFERENCE: 2879-72

CURRENT APPLICATION NUMBER: US/09/565,423

CURRENT FILING DATE: 2000-05-05

PRIOR APPLICATION NUMBER: 60/132,892

PRIOR FILING DATE: 1999-05-06

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

'I. FUNCTION: Cytokine that binds to TNPRSF13B/TACI and TNPRSF17/BCMA.

'I. FUNCTION: Cytokine that binds to TNPRSF13B/TACI and TNPRSF17/BCMA.

ITRPSF13/APRIL binds to the same 2 receptors. Together, they form a 2 ligands - 2 receptors pathway involved in the stimulation of B-
and T-cell function and the regulation of humoral immunity. A third B-cell specific BAFF-receptor (BAFFR/BR3) promotes the
                                                                                                                                                                                                                                                                                                                                                                                                                                            survival of mature B-cells and the B-cell response.
SUBDAT: HOMOSTINE.
SUBCELLULAR LOCATION: TYPE II MEMBRANE PROTEIN. ALSO EXISTS AS AN EXTRACELLULAR SOLUBLE FORM.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TUMOR NECROSIS FACTOR LIGAND SUPERFAMILY

-!- FUNCTION: THIS PROTEIN PROMOTES THE GTP-DEPENDENT TRANSLOCATION OF THE NASCENT PROTEIN CHAIN FROM THE A-SITE TO THE P-SITE OF THI RIBOSOWE (BY SIMILARITY).
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: BELONGS TO THE GTP-BINDING ELONGATION FACTOR FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                               Mita K., Morimyo M., Ito K., Sugaya K., Bbihara K., Hongo B., Higashi T., Hirayama Y., Nakamura Y.; Comprehensive Cloning of Schizosaccharomyces pombe genes encoding translation elongation factors."; Gene 187:259-266(1997).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       IsoId-Q9WV48-5; Sequence=VSP_006076, VSP_006077;
TISSUE SPECIFICITY: Expressed only in brain (neuropil of cortex,
CA1 region hippocampus and molecular layer of cerebellum).
DEUELOPMENTAL STAGE: Expression increases from low levels at birth
to high levels at 3-4 weeks before dropping slightly in adulthood.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Expressed in the cortex and the molecular layer of the cerebellum at postnatal day 7. Isoform 2 expression does not change during developmment of both cortex and cerebellum. Isoform 4 expression
                                                                                                                  δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SUBCELLULAR LOCATION: Cytoplasmic; postsynaptic density of neuronal cells. Colocalizes with alpha-latrotoxin receptor 1. ALTERNATIVE PRODUCTS:
